

## BACK UP & RESTORE ALL PHYSICAL AND VIRTUAL SYSTEMS, APPLICATIONS AND FILE DATE

easy-to-use, scalable data backup & restore solution

Atempo transforms backup by focusing on what really matters – data recovery. Whatever the platform or data set, a restore is only a few clicks away

- Unique restore approach
- Supports both physical & virtual environments
- Wide platform support
- Hardware independent

### WHAT YOU ASKED US?

- How can I know when files have been deleted?
- Can I continue to protect my legacy platforms?
- Why do I need deduplication?
- What is the Atempo “open bar” license?

Instantly view directories and files that have been deleted

Comprehensive Compatibility Guide

Global source-based deduplication for optimized storage & backup durations

Freedom to protect what you want, when you want

Fabien Hary  
Data Manager,  
SDIS 80

*“The efficiency of the Tina’s centralized interface allows us to recover a file, a database or a VM in the same way, whether the data is stored on disk or tape. Another major benefit is time navigation which allows us to recover a lost file even if the user does not remember the name or the location of the file.”*

## DOES YOUR CURRENT DATA PROTECTION SOLUTION:

- Encrypt and protect data on the fly across the network
- Ensure no breach of data integrity/ data retention
- High security - restore only if you use certificates
- Run restore tests to ensure no hidden surprises
- Track changes made to the backup configuration – we call this the "Audit trail"
- Search for files – even those deleted!

## WHY USE TINA FOR RESTORES?

### Intuitive Restore Interface

Whatever the platform or application Tina presents the same look and feel for every type of restore. Restoring data has never been easier.

### Famous restore for deleted files

Tina compares data that is on disk with what has been protected. So even if you have no idea of what disappeared, Tina will show you the way.

### Centralized Administration

All the backup agents and applications are managed through one interface.

Managing data throughout its lifecycle can be complex, but Tina keeps track of all backup destinations and can even move data from disk to tape without any manual intervention.

### French software vendor, European backup solution leader

Atempo is a French software vendor and European leader with a global presence in the domain of data protection and data movement. The company is present in Europe, USA and Asia via a network of over 100 partners, integrators and managed service providers.

## TECHNICAL CHARACTERISTICS

### RICH COMPATIBILITY GUIDE FOR BOTH PHYSICAL & VIRTUAL MACHINES (EVEN LEGACY PLATFORMS)

- Supports all the major operating systems including Windows, Linux, macOS, Solaris, AIX & iSeries
- Virtual environments including VMware, Microsoft Hyper-V
- Exchange, SharePoint, SQL, MySQL, PostgreSQL, Oracle, SAP HANA, IBM Domino, DB2

### GLOBAL DEDUPLICATION

- Hardware independent solution
- Deduplicates at the source for optimum deduplication ratios
- Dedupes across all platforms both physical & virtual

### 3-CLICK RESTORE

- 1: Select. 2: Synchronize on date/time. 3: Restore
- Express Restart for virtual machines direct from backup

### STORAGE FLEXIBILITY

- Multiple storage destinations, including disk, VTL, deduplication storage and tape
- Automatic D2D2T for extra data security
